Product Description

GOODSENSE LH series 3.5T high voltage lithium battery forklifts inherit the mature and reliable internal combustion forklift platform, equipped with advanced high-voltage permanent magnet technology and intelligently controlled liquid cooling system. The electric forklift has the same chassis as the internal combustion ones, and its performance is comparable to that of the internal combustion forklift, especially suitable for heavy work

Advanced H-type remote drive unit. compact structure, lower gravity center, more reasonable layout, most stable driving. The 370V high-voltage electrical platform is used to meet the high-performance operation, and at the same time, it has a lower working current, reduces the energy loss caused by the current thermal effect, and significantly improves the forklift's endurance.
